JUNIOR IT SPECIALIST
EBENEZER SEYOUM

+251 909 299 398 | abseyoum16@gmail.com

LinkedIn | GitHub | Addis Ababa, Ethiopia

I recently graduated with a degree in Information Technology and have gained practical experience in full-stack development , mobile app development , networking , and cybersecurity. I'm comfortable working with Python, PHP, React.js, Node.js, and troubleshooting networks, and I've also completed training in IoT and cybersecurity. During university, I worked on a court information management system project where I built a full-stack application to help improve case tracking and data access for legal institutions. I also had the chance to intern at East Africa Lion Brands, where I supported system maintenance, IT support, and security tasks. I enjoy working with databases, Git, and Linux, and take pride in writing clean, efficient code that solves real problems. I'm always eager to learn new skills, adapt to challenges, and contribute meaningfully to any team I join. In addition to development, I have a strong interest in DevOps practices, including version control with Git, automation, CI/CD pipelines, Linux system administration, and containerization tools like Docker. Now, I'm excited to bring my abilities to a forward-thinking organization where I can continue growing as a developer.

SKILLS AND EXPERTISE

Programming: Python, PHP, JS (React.js, Node.js)

Networking & Infrastructure Support

Cybersecurity Principles & Practice

Git & Version Control

Problem solving

Linux Administration (Basic CLI, System Monitoring)

IoT Fundamentals

Database Management (MongoDB, MySQL)

IT Support & Troubleshooting

PROFESSIONAL EXPERIENCE

IT Specialist Intern   **June 2024 – August 2024**
East-african-lion-brand-industries-plc

- Delivered technical support by resolving hardware, software, and network issues across departments.
- Helped maintain LAN infrastructure and ensured stable connectivity.
- Assisted with cybersecurity tasks like access control and system updates.
- Supported system setups, configurations, and software installations.
- Documented issues and contributed to improving IT support processes.

CERTIFICATIONS

- Cybersecurity Training – GeezTech Security Testers , February – June 2025
- IoT Basics Practical Training – Mizan Tepi University, March 14–20, 2025

EDUCATION

Bachelor of Science in Information Technology   **2022 - 2025 GC**
Mizan Tepi University

PROJECT

- **court information Management system**

The web based application used PHP and JavaScript programming languages together with Bootstrap to modernize court procedures. The system enables secure case tracking and litigant information management through database automation which enhances administrative efficiency. The email notification system provides litigants with automatic alerts about upcoming hearings and procedural changes and required document postings which enhances communication and provides complete transparency to all parties involved.
